ADDENDA

MODEL 2801 RECEIVER

The Model 2801 Receiver and the Model 2801A Receiver are identical except for minor changes on the front panel. In the 2801A Receiver, the MAN/AGC toggle switch has been removed and the switch function ganged with the RF GAIN control. A PHONE jack is mounted where the toggle switch was previously located. This instruction book is applicable in all other respects to both receiver models.

MODEL 2801 UHF RECEIVER, PERFORMANCE SPECIFICATIONS

Type Reception AM, FM, or CW  
 Tuning Range 250-1000 mc (in two bands)

Band A

Frequency Range 250-500 mc  
 IF Rejection 65 db (minimum)  
 Image Rejection 40 db (minimum)  
 Noise Figure 10 db (maximum)  
 Oscillator Radiation 150 uv (maximum at antenna terminal)  
 Input Impedance 50 ohms, unbalanced

Band B

Frequency Range 490-1000 mc  
 IF Rejection 65 db (minimum)  
 Image Rejection 50 db (minimum)  
 Noise Figure 14 db (maximum)  
 Oscillator Radiation 300  $\mu$ v (maximum, at antenna terminal)  
 Input Impedance 50 ohms, unbalanced  
 IF Frequencies 60 mc and 21.4 mc (in double conversion)  
 Receiver Bandwidths 1 mc or 200 kc, selection from front panel, in either AM or FM operation; bandwidths measured from antenna to IF output.  
 BFO 21.4 mc (controlled from front panel)  
 SDU Output Frequency 21.4 mc

Sensitivity

Type of Reception	Receiver Bandwidth	RF Input	Modulating Frequency	Deviation or % Mod.	Sig. + Noise by Noise
FM	1 mc	12 $\mu$ v	1 kc	100 kc	10 db (min.)
FM	200 kc	8 $\mu$ v	1 kc	100 kc	22 db (min.)
AM	1 mc	18 uv	1 kc	50%	10 db (min.)
AM	200 kc	8 $\mu$ v	1 kc	50%	10 db (min.)

RF Gain Control System

FM Reception: AGC only  
 AM Reception: AGC or manual, selection and control from front panel.

## VIDEO OUTPUT CHARACTERISTICS

### AM Operation

Output Level	110 volts peak-to-peak (min.) for 50% modulation at 100 mv input
Output Stability	7-db maximum level variation for RF inputs between 10 $\mu$ v and 1000 $\mu$ v

### FM Operation

Output Sensitivity	200-kc bandwidth: 0.05 volt per kc deviation (Min) 1-mc bandwidth: 0.01 volt per kc deviation (Min)
Output Stability (as measured with 2500-cps RC low-pass filter with a 1-kc modulating frequency)	200-kc bandwidth: less than 2-db variation for RF inputs above 1.6 $\mu$ v 1-mc bandwidth: less than 2-db variation for inputs above 3.0 $\mu$ v

### Video Amplifier Frequency Response

3 db maximum variation, 50 cps to 500 kc, into a load of 5000 ohms in parallel with 2000  $\mu$ f

### Total Harmonic Distortion

FM reception: 1% (max) using 1-mc bandwidth, 240-kc deviation, 1-kc modulating frequency, and an RF input of 500  $\mu$ v

AM reception: 3% (max), using 200-kc bandwidth, 50% modulation 1-kc modulating frequency and an RF input of 500  $\mu$ v

## AUDIO OUTPUT CHARACTERISTICS

<u>Output Power</u>	0.16 watts (Max) variable from front panel
<u>Output Impedance</u>	600 ohms or 150 ohms
<u>Frequency Response</u>	30 db variation (max), 300 cps to 25 kcs
<u>Squelch</u>	Audio output reduced a minimum 35 db when RF input drops below a preset level: sensitivity adjustable from front panel over the approximate range of 1.0 to 100 $\mu$ v.

Carrier Operated Relay

Operates at RF levels in the range of 1.0 to 100  $\mu$ v; sensitivity adjustable from front panel; one set of SPDT contacts available for external circuit, and 6.3 vac from internal supply available to external circuit (0.2 ampere max. drain); switched on or off by relay.

Metering

Signal strength meter, uncalibrated, on front panel

Tuning meter, zero-center, uncalibrated, on front panel

Power Requirement

115 or 230 vac, 50 to 60 cps, 100 watts

Size

19 inches wide, measured at front panel; suitable for rack mounting

5-1/4 inches high

17 inches deep, measured from front panel to maximum rearward extension of chassis

Weight

34 pounds

Connectors

Antenna terminals: N-type

SDU Output: BNC-type

Video Output: BNC-type

Audio and COR connections: barrier terminal strip

Power: male, twist-lock receptacle

## GENERAL DESCRIPTION

The Model 2801 UHF Receiver is an AM-FM-CW double-conversion super-heterodyne with a frequency range of 250 mc to 1000 mc in two bands, 250 mc to 500 mc and 490 mc to 1000 mc, with a bandwidth choice of either 1 mc or 200 kc. A panel control with positions marked: 1 MC FM, 1MC AM, 200 KC FM, and 200 KC AM, is used to select the mode of operation, with CW operation being achieved by turning the BFO control to ON while in the AM mode.

The particular features of the receiver include the following: provisions for operation with either a single antenna or a separate antenna for each band; a tuning meter; a signal strength meter; a broadband IF spectrum display unit (SDU) output; two audio outputs (of 150-ohm and 600-ohm impedance); a high impedance video output; an audio squelch circuit with adjustable threshold; a carrier operated relay (COR) circuit with adjustable threshold, adjustable time-delay of the carrier-off action, a time-delay disable control, one set of form C auxiliary equipment contacts and a COR-switched source of 6.3 vac power; and a self-contained, silicon diode power supply designed for use on either 115 or 230 vac.

All controls and connectors are clearly marked and appear either on the front panel or on the chassis rear apron. The unit is designed for mounting in a standard 19-inch rack and constructed around an aluminum chassis on which three separately shielded subassemblies are mounted. These subassemblies contain a separate RF tuner for each band and a dual-bandwidth IF strip.

Further information concerning the receiver may be found by studying the table of specifications, the block diagram, and the schematic diagram which have been included in this book.
